

Product Description and Specification

Name:	Ultra White Rock
Origin:	Northern California quarry
Geology:	Dolomite
Color:	White
Description:	<p>This material is the result of crushing large white marble-like rocks and boulders producing a beautiful nearly pure white sparkling gravel. It is likely the most expensive decorative rock in the industry and worth every penny. Most white rock materials contain a lot of grey or gold and other off-colored rock materials. Some contain strong traces of iron and start leaching rust after getting wet. This dolomite rock is as clean as it gets. Provides a great color-contrasting ground cover for pathways with a beautiful evening and nighttime color highlights.</p>
Descripción:	<p>Este material se obtiene triturando grandes rocas y cantos rodados blancos similares al mármol, lo que produce una hermosa grava brillante de un blanco casi puro. Es probablemente la roca decorativa más cara del sector y vale cada centavo. La mayoría de las rocas blancas contienen mucho gris o dorado, así como otros materiales rocosos descoloridos. Algunas contienen fuertes trazas de hierro y comienzan a oxidarse al mojarse. Esta roca dolomítica es impecable. Proporciona una excelente cobertura vegetal con contraste de color para senderos, con hermosos reflejos de color al atardecer y por la noche.</p>
Size:	Commonly available from 1/4", 3/8", 3/4", 1/2" to 1-1/2 inches.
Transportation:	Large orders shipped in End-dump and Super 10 trucks. Smaller orders shipped flatbed.
